Philadelphia City Hall

The Philadelphia City Hall is the seat of the municipal government of the City of Philadelphia. It was designed by John McArthur Jr. in the Second Empire style, and was constructed from 1871 to 1901 at a cost of \$24 million.

At 548 feet, it was intended to be the tallest building in the world when construction started, but was surpassed by the Washington Monument and the Eiffel Tower before completion. However, it remained the world's tallest habitable building until 1908.
